Noida, Uttar Pradesh, India

## Professional Summary

---

Full-Stack Engineer with 2 years of experience building scalable web applications and real-time systems. Specialized in API architecture, performance optimization, and data-driven workflows. Proven impact in reducing infrastructure costs (30%), improving latency, and delivering production-grade real-time systems.

## Technical Skills

---

**Languages:** C/C++, Javascript

**Frontend:** React.js, React Native, HTML5, CSS3

**Backend:** Node.js, Express.js, RESTful Systems

**Database:** SQL, Query Optimization, Stored procedure

**Tools:** Git, GitHub, Azure Speech Services

**Core:** System Design, API Architecture, Performance Optimization, State Management, Authentication Systems

## Experience

---

### Associate Software Engineer (Full-Stack)

Feb 2025 – Present

*Confidential*

- Architected a low-latency pronunciation assessment pipeline using Azure Speech Services, enabling real-time word-level feedback, driving a **10% increase in user engagement**, and ensuring consistent performance under concurrent user interactions.
- Optimized API workflows and introduced caching strategies, reducing infrastructure costs by **30%** and improving response times.
- Designed a synchronized EPUB rendering and playback system using SMIL and React, ensuring accurate timing alignment, consistent state across pages, and seamless user experience during reading sessions.
- Engineered per-page recording and playback pipelines with real-time persistence and S3 integration, enabling reliable data capture and playback across dynamic user interactions.
- Developed modular personalization systems (avatar engine) with predictable state handling.
- Optimized rendering performance of interactive modules, ensuring smooth execution across low and high-end devices.

### Software Engineer (Full-Stack)

Aug 2024 – Jan 2025

*Abha Technologies, India*

- Architected backend systems for authentication, cart lifecycle, and order workflows using Node.js and SQL, supporting consistent transaction handling across multiple application modules.
- Designed and implemented OTP-based authentication with secure session management, handling high-frequency login requests and improving overall authentication reliability.
- Optimized database queries and execution paths, reducing average API response time from **1.5s to 800ms** for core operations.
- Designed structured frontend-backend data flows, enabling scalable dashboard operations and efficient handling of real-time order and user data.

## Open Source Contribution

---

### Swagger UI (10k+ GitHub stars)

2025

- Contributed a production-critical fix resolving Node.js 20+ compatibility issues in Swagger UI (10k+ stars), ensuring ecosystem stability across modern environments.
- Delivered a merged solution (v5.27.1) through multi-stage reviews, collaborating with global maintainers on a widely adopted developer tool.

## Education

---

### Chandigarh University

2020 – 2024

Bachelor of Engineering in Computer Science
